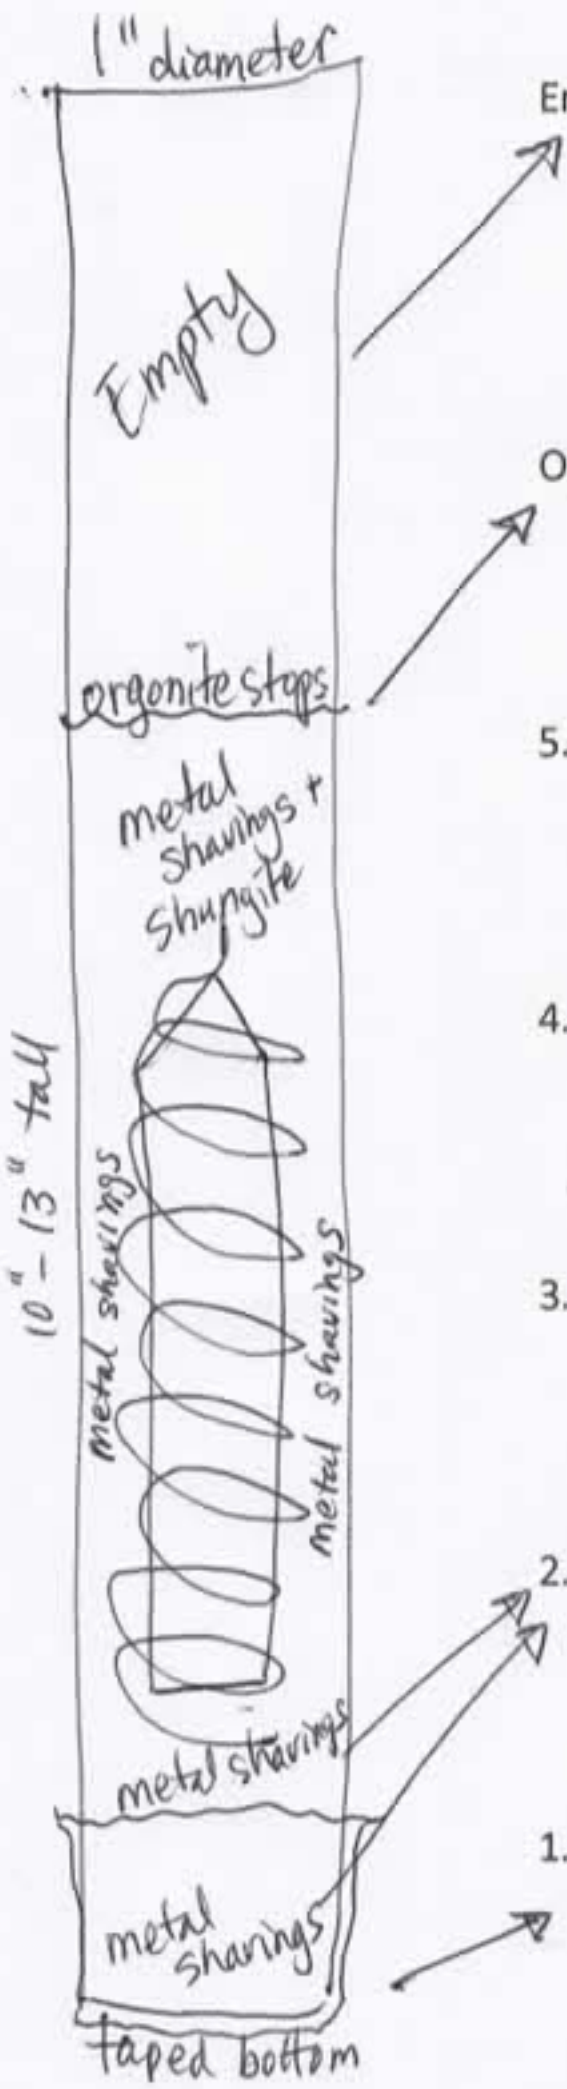
Carmen's NOTES – HOW TO MAKE ORGONITE EARTH PIPES from Don and Carol Croft (2015)

NEED: 1 inch diameter copper pipe cut to 10"-13" length.

Note: You're building your EP upside down. It will go in the ground with the empty chamber first. You'll make a hole in the ground and bury the entire EP in the ground with the tape up, you won't see the resonating chamber.

*Figure out how you're going to place the pipe so that you can fill it up and keep it upright while orgonite sets.



Empty Resonating Chamber – DO NOT fill it all the way to the top with resin or orgonite.

Orgonite stops between ½ and 2/3 full. If you get some extra resin on top it's okay, but try to not add much extra if possible.

5. Fill with resin if you just put in metal shavings of different kinds/shapes 2/3 of the way up, instead of blending the orgonite first and scooped the mixture in the pipe.
4. Add shungite and more metal shavings/orgonite mix until ½ to 2/3 is full.
3. Put the quartz point with the coil around it in the pipe with the Quarts Point UP. (Qtz Point – thicker, longer than for TBs.)
2. Add some metal shavings or orgonite (metal of different sizes and shapes in activated resin) in the pipe (about 1 inch worth).
1. Use painters tape to tape the bottom of the copper pipe so the resin doesn't leak and can set.
